متن زیر رابخوانید و به سوالات داده شده هر قسمت پاسخ دهید.

All of our energy comes from the sun which is our nearest star. The sun sends out huge amounts of energy through its rays every day. We call this energy solar energy or radiant energy. Life on earth would not exist without the sun because our planet would become totally frozen. We use this solar energy in many different ways. The sunlight lets us see and warms us. Plants use light from the sun to grow and they store it as chemical energy. This process is called Photosynthesis. The energy is stored in their roots, fruits, and leaves. This energy feeds every living thing on the earth. When we eat plants and the food made from plants, the energy is stored in our bodies especially in our muscles and brain cells. We use this energy for everything we do. We use energy when we sing a song, think a thought, tell a joke or climb mountains. Everything needs energy.

Just as humans store energy in their bodies, the earth stores the sun's energy too. The sun's energy has also been stored in coal, oil, and natural gases which are known as fossil fuels. We may use the energy in these fossil fuels to make electricity. We light and heat our homes, schools, and offices and also run our computers by electricity. Our cars and planes run on gasoline which comes from oil. Fossil fuels are known as non-renewable sources of energy, so they can't be used over and over again. This means that one day they will run out!

Luckily, there are some renewable energy sources we can use, and we can keep using. Unlike non-renewable fossil fuels, **they** will not run out. Three forms of renewable energy are: solar energy, water energy and wind energy. Solar energy can be caught through solar panels. People put solar panels on the top of houses to help capture the sun's energy and transform it into heat and electricity. Water is also used to produce electricity. Wind is a third form of renewable energy. Wind turbines can get the energy of the moving air and turn it into electricity. All these renewable energy sources are essential for us because they will not run out, so we need to get better and better at using them.

#### Choose the best answer.

- **41.** What does "**they**" in paragraph3, line 2 refer to?
  - a) fossil fuels

- b) non-renewable energy sources
- c) renewable sources of energy
- d) solar panels
- **42**. What is this passage mostly about? It is about.....
- a) how long it takes for light to reach the earth from the sun
- b) the importance of energy for human life and where energy comes from
- c) different types of non-renewable sources of energy used by people
- d) how fossil fuels were formed
